1-Page Website Launch Cheat Sheet

1. Buy a Domain

Use: Namecheap, Google Domains, etc.
Example: yourdomain.com

2. Choose a Hosting Platform

Options:
- Website Builders: Wix, Squarespace, Shopify
- CMS Hosting: WordPress.com, Ghost
- Custom/Code: Vercel, Netlify, DigitalOcean, Bluehost

3. Connect Domain to Host

A) If using a Website Builder (Wix, Shopify, etc.):
- Copy A & CNAME records from platform
- Go to domain registrar > DNS settings:
  - A record: @ -> [IP address]
  - CNAME: www -> [custom host]
- Forward root domain to www if needed

B) If using Netlify/Vercel:
- Add domain on their dashboard
- Copy CNAME or A record
- Add those in registrar DNS

4. SSL Certificate

- Most hosts offer free SSL (Let's Encrypt)
- Self-hosted: Install manually or via Cloudflare

5. Set Up Backend (Optional)

- Choose stack: Node.js, Python, PHP, etc.
- Or use managed services: Firebase, Supabase, Render

6. Email (Optional but Professional)

- Use Zoho, Google Workspace, or host
- Set MX records in domain DNS:
  Example: MX -> mx.zoho.com priority 10

7. SEO & Indexing

- Submit sitemap to Google Search Console
- Add title/meta tags & alt text
- Use robots.txt & sitemap.xml

8. Final Checklist

- DNS propagation: ~minutes to 48 hrs
- Test www and root domain
- Mobile + desktop optimization
